

Is your IT Hassle-Free?

As a business owner you want your IT infrastructure to "just work". Not an unreasonable expectation, given that we have our phone systems and utilities working fine pretty much all the time. While technology has created very powerful applications along with the advances in technology there seem to be an equal number of problems that hamper our ability to use technology to its fullest effect.

One of the key reasons for IT problems is that routine maintenance of IT infrastructure does not happen proactively and regularly. The only time IT infrastructure is attended to is when a severe problem has happened leading to huge support costs, even more expensive productivity losses and even possible loss of critical business data.

GIGA-scan from **K.I.T. Corp** is a proactive IT Management Service designed to mitigate a large number of issues that create the "IT Hassle Factor". Delivered from our 24X7 network operations center, the service emphasizes proactive monitoring, regular preventative maintenance and fast responsive remote support.

GIGA-scan from **K.I.T. Corp** is a low cost service available at a fixed monthly cost, taking care of activities such as deploying patches, managing anti-virus updates, removing spyware, monitoring backups and other important routine activities that ensure high availability of computer systems.

In short **GIGA-scan** is a proactive approach to managing your IT infrastructure which translates into lower costs, higher uptime and less headaches.

If you feel **GIGA-scan** is what your IT network needs,
